## **DETAILED ACTION**

## **Drawings**

The drawings are objected to under 37 CFR 1.83(a) because they fail to show pointers on how the signals are directed in figures 3 and 4 as described in the specification. It is not clear how the signal is directed between the two summers 106a and 106b. Any structural detail that is essential for a proper understanding of the disclosed invention should be shown in the drawing. MPEP § 608.02(d). Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the

applicant will be notified and informed of any required corrective action in the next Office

action. The objection to the drawings will not be held in abeyance.

Specification

The disclosure is objected to because of the following informalities: Informalities in paragraph 0025, Line 5, "(pd1)" and Line 10, "negative input" and paragraph 0028,

Line10, "atop".

Appropriate correction is required.

Claim Rejections - 35 USC § 112

Claims 1 – 23 are rejected under 35 U.S.C. 112, first paragraph, as failing to

comply with the enablement requirement. The claim(s) contains subject matter which

was not described in the specification in such a way as to enable one skilled in the art to

which it pertains, or with which it is most nearly connected, to make and/or use the

invention.

In reviewing the specification for figure 3 in paragraphs 0025 - 0027, it is unclear

for one of ordinary skill to understand the operation of the circuit shown. According to

paragraph 0025, lines 1 - 2, "a negative output from summer 106a is provided to a

positive input of summer 106b". It is unclear what is summed in summer 106a. As

Art Unit: 2611

described, there is no summation involved in 106a and could be assumed that that pd01 = pd0. However, this not as recited in the claims, where the phase differences of the at least two phase detectors are summed.

In reviewing the specification for figure 4, no description was found in the disclosure to enable one of ordinary skill to understand the operation of the embodiment.

## Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Aristocratis Fotakis whose telephone number is (571) 270-1206. The examiner can normally be reached on Monday - Thursday 7 - 5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Chieh Fan can be reached on (571) 272-3042. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
